

Low Profile, Recessed Electrical Box for EIFS & Stucco

Arlington Industries' IN BOX for EIFS and stucco is now available from Plastic Components! Its one-piece design saves labor time, and because IN BOX installs *in the wall*, you'll get a great-looking job too. It protrudes from the wall just enough for a neat, clean appearance.

EIFS

The **fixed-flashing** style provides superb moisture control in 1-1/2" wall systems. This box has a large, built-in flange that eliminates the need for a separate flashing.

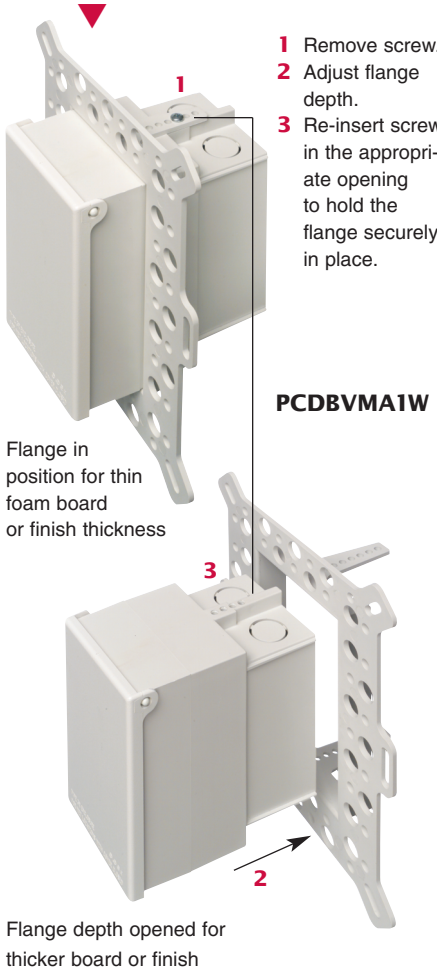

The **adjustable flange** on this IN BOX adjusts to fit any foam board thickness or custom finish in concrete block and stucco applications. For finishes 1/4" to 2.5" thick on walls 2.75" to 5" deep.

Stucco

IN BOX for stucco or textured finishes has holes in the fixed flange to allow the stucco to bond firmly.

- Shipped-in-place mud cover
- White or clear weather-proof in use cover
- Meets NEC 2005
